### List of Figures

1.1 Efficiency and profitability of local and foreign banks in Switzerland ........................................... 2
1.2 ROE weighted by the capitalization level of different countries ......................................................... 3
1.3 Differentiation drivers .......................................................................................................................... 5
1.4 Segmentation criteria .......................................................................................................................... 6
2.1 The lottery given by the returns of a fund of hedge funds ................................................................. 13
2.2 Mean-variance representation of the risk premium ............................................................................. 16
2.3 The efficient frontier .......................................................................................................................... 16
2.4 Risk aversion and risk premium ........................................................................................................ 17
2.5 Selecting the optimal portfolio .......................................................................................................... 17
2.6 Two-fund-separation ........................................................................................................................ 19
2.7 Illustration of the certainty equivalent, risk premium, and risk aversion ......................................... 29
2.8 Jensen’s inequality ............................................................................................................................. 30
2.9 The value function ............................................................................................................................. 39
2.10 The probability weighting function ................................................................................................ 42
2.11 Return of hedge funds as they are and as seen by a prospect theory investor .................................. 45
2.12 Return probabilities ......................................................................................................................... 46
2.13 Risk taking conditions ..................................................................................................................... 49
2.14 Mean-variance preferences, based on the piecewise power value function of Kahneman and Tversky 51
2.15 Mean-standard deviation diagram with PT-indifference curves based on the piecewise exponential value function 51
2.16 Reward-risk perspective on the prospect theory ............................................................................. 55
2.17 Cumulative gross returns (1993–2006) ............................................................................................ 56
2.18 Asset returns in a mean-variance diagram ....................................................................................... 56
2.19 Asset returns in an average-gain-loss diagram ................................................................................ 57
2.20 Mean-variance tangential portfolio .................................................................................................. 57
2.21 Optimal asset allocation of a behavioural investor with $\beta = 2$ ....................................................... 58
2.22 Optimal asset allocation of a behavioural investor with $\beta = 5$ ....................................................... 58
2.23 Optimal asset allocation of a behavioural investor with $\beta = 10$ ..................................................... 58
2.24 Two quite different structured products with the same mean and variance .................................... 59
2.25 The mean-variance paradox ............................................................................................................ 60
2.26 The tangent portfolio without SPI+ .................................................................................................. 61
2.27 The tangent portfolio with SPI+ ....................................................................................................... 61
2.28 Optimal asset allocation of a behavioural investor without SPI+ ..................................................... 61
List of Figures

2.29 Optimal asset allocation of a behavioural investor with SPI+ 62
2.30 The Ellsberg paradox 64
2.31 Similarities and differences of expected utility, prospect theory, and
mean-variance 65
3.1 A typical decision-making process 68
3.2 Illustration of conditional probability 71
3.3 Experimental results on the gambler’s fallacy 73
3.4 Performance of LGT-GST fund and its benchmark 74
3.5 Ideal growth stock purchase according to Fuller and Thaler Asset
Management 77
3.6 The overconfidence effect in the case of forecasting 79
3.7 Hazardous trading 80
3.8 Average return per information level 80
3.9 Exploiting the favourite long-shot bias 82
3.10 Portfolio pyramid 83
3.11 Disposition effect 84
3.12 Equity portfolio weights of U.S., Japanese and British investors (Based on
French and Poterba (1991)) 85
3.13 Investor’s payoff over time 91
3.14 Cultural differences according to Hofstede’s “Uncertainty
Avoidance Index” 95
3.15 Value functions of students in different countries based on the results of
Bontempo et al. (1997) 96
3.16 Value functions of students in different countries based on the results of
Weber and Hsee (1998) 97
3.17 Inflation rate versus degree of patience in several countries 99
3.18 Income per capita versus degree of patience in several countries 99
3.19 Individualism versus loss aversion index (theta) 100
3.20 Trend chasing and individualism around the world 101
3.21 Ambiguity aversion and the equity premium 104
4.1 Different advice from various banks according to Stocks magazine
41–42, 2003 107
4.2 An experimental laboratory at the University of Zurich 109
4.3 Risk ability in the mean-variance analysis 116
4.4 Mean-variance analysis with risk ability 116
4.5 Heterogeneity in the individuals’ risk and loss aversion assessed in a study
at ZKB 118
4.6 Heterogeneity in the individuals’ risk aversion over gains $\alpha^+$ and losses $\alpha^-$ 118
4.7 Heterogeneity in the individuals’ perception of probabilities 119
4.8 Time diversification: The longer the investment horizon, the better
the return-risk ratio 123
4.9 Probability for bonds beating stocks for portfolios with different time
horizons 124
4.10 Optimal asset allocation over different time horizons 124
4.11 Investment advice of the former Bank Leu 130
4.12 Optimal asset allocation of Christine Kuhn according to BhFS 133
4.13 Client’s classification based on predefined risk profiles 133
5.1 Optimal payoff from the perspective of behavioural investors
5.2 Payoff of the Ladder Pop at maturity
5.3 SMI and Ladder Pop prices (indexed) from 15.01.2002 to 12.12.2006
5.4 Two ways of achieving 8.1% return after two years: Investing at 4% each year or changing to 10% after the first year
5.5 Scenarios setup
5.6 Payoff DAX Sparbuch per month
5.7 Payoff of a barrier-like structured product
5.8 Optimal structured-product of a CRRA investor with $\alpha = 0.8$
5.9 Optimal structured product for a mean-variance investor
5.10 Optimal structured product for a behavioural investor with $\beta = 2$
5.11 Optimal structured product for a behavioural investor with $\beta = 1$
5.12 Optimal structured product of an investor with biased perception of probabilities
5.13 Interactive multi-touch table
6.1 Example of Markov matrices
6.2 The CRRA investor on a random walk
6.3 TAA of the CRRA investor on mean reversion after “good” times
6.4 TAA of the CRRA investor on mean reversion after “bad” times
6.5 TAA of the behavioural investor on a random walk
6.6 TAA of the behavioural investor on mean reversion after “good” times
6.7 TAA of the behavioural investor on mean reversion after “bad” times
6.8 Sample paths of a random walk without drift
6.9 Variance of random walks over time
6.10 An example of mean-variance ratios of a random walk over different time horizons
6.11 Mean-variance ratio of S&P 500 annual logarithmic returns (1871–2007)
6.13 Asset allocation of the CRRA investor on a random walk
6.14 Asset allocation of the CRRA investor on mean reversion after “bad” times
6.15 Asset allocation of the CRRA investor on mean reversion after “good” times
6.16 Asset allocation of the CRRA investor on mean reversion after “good” times (fix-mix)
6.17 Asset allocation of the CRRA investor on mean reversion after “bad” times (fix-mix)
6.18 Asset allocation of the behavioural investor under a random walk
6.19 The behavioural investor on mean reversion after “good” times
6.20 The behavioural investor on mean reversion after “bad” times
7.1 Performance of German stocks (DAX) versus German government bonds (REX index)
7.2 Cumulative dividends from DAX versus interest earnings from REX
7.3 Consumption smoothing
7.4 Utility derived from consumption drawn from different mental accounts
7.5 Separating risk preference from risk ability
7.6 Perfect consumption smoothing
7.7 The impact of the discount factor on current consumption

List of Tables

1.1 Total wealth of high net worth individuals worldwide 4
1.2 Wealth management versus brokerage 4
2.1 Historical equity premiums of different countries 15
2.2 The asset allocation puzzle 19
2.3 An example of prospect theory violating Axiom 0 43
2.4 Risk taking behaviour in the face of gains and losses with small and moderate probabilities 50
2.5 Mean-variance violating the independence axiom 62
2.6 Advantages and disadvantages of the three theories of choice 64
3.1 Descriptive statistics of the 1-year annual real returns of the value weighted CRSP all-share market portfolio, the intermediate government bond index of Ibbotson, one month T-Bill as risk-free rate, and the size and value docile portfolios from 1927 to 2007 (81 yearly observations) 69
3.2 The splitting bias 78
3.3 Famous bubbles (Shleifer, 2000) continued by ourselves 92
3.4 Fitting prospect theory parameters of the results of Weber and Hsee (1998) and Bontempo et al. (1997) 97
3.5 Volatility and market returns in different countries 102
3.6 Value and glamour stocks performance from 1975 to 1995 103
4.1 Fighting against biases leading to irrational decisions 105
4.2 Summary investment advice of BhFS and the former Bank Leu 133
5.1 Final wealth with the underlying, the Ladder Pop, and a bond 141
5.2 Expected utility and certainty equivalents of a CRRA investor 142
5.3 Product returns 142
5.4 Prospect utility and certainty equivalents of a behavioural investor 142
5.5 DAX return per month and DAX bonus for that month (Nov. 2006–Dec. 2007) 144
5.6 DAX return and DAX bonus per month (Nov. 2006–Dec. 2007) 144
5.7 DAX return and DAX Sparbuch return on annual basis 145
5.8 Final wealth of a CRRA investor 147
5.9 Expected utilities and certainty equivalents of CRRA investors 147
5.10 Minimum appreciation of the underlying required by CRRA investors 147
5.11 Prospect utility of behavioural investors with an absolute reference point 148
