**Preface**  
ix

1 Fundamentals  
1.1 4G Networks and Composite Radio Environment  
1.2 Protocol Boosters  
1.2.1 One-element error detection booster for UDP  
1.2.2 One-element ACK compression booster for TCP  
1.2.3 One-element congestion control booster for TCP  
1.2.4 One-element ARQ booster for TCP  
1.2.5 A forward erasure correction booster for IP or TCP  
1.2.6 Two-element jitter control booster for IP  
1.2.7 Two-element selective ARQ booster for IP or TCP  
1.3 Hybrid 4G Wireless Network Protocols  
1.3.1 Control messages and state transition diagrams  
1.3.2 Direct transmission  
1.3.3 The protocol for one-hop direct transmission  
1.3.4 Protocols for two-hop direct-transmission mode  
1.4 Green Wireless Networks  
References  

2 Physical Layer and Multiple Access  
2.1 Advanced Time Division Multiple Access-ATDMA  
2.2 Code Division Multiple Access  
2.3 Orthogonal Frequency Division Multiplexing  
2.4 Multicarrier CDMA  
2.5 Ultrawide Band Signal  
2.6 MIMO Channels and Space Time Coding  
References
### CONTENTS

3 Channel Modeling for 4G

3.1 Macrocellular Environments (1.8 GHz) 47
3.2 Urban Spatial Radio Channels in Macro/MicroCell Environment (2.154 GHz) 50
   3.2.1 Description of environment 51
   3.2.2 Results 52
3.3 MIMO Channels in Micro- and PicoCell Environment (1.71/2.05 GHz) 53
   3.3.1 Measurement set-ups 56
   3.3.2 The eigenanalysis method 57
   3.3.3 Definition of the power allocation schemes 57
3.4 Outdoor Mobile Channel (5.3 GHz) 58
   3.4.1 Path loss models 60
   3.4.2 Path number distribution 60
   3.4.3 Rotation measurements in an urban environment 61
3.5 Microcell Channel (8.45 GHz) 64
   3.5.1 Azimuth profile 65
   3.5.2 Delay profile for the forward arrival waves 65
   3.5.3 Short-term azimuth spread for forward arrival waves 65
3.6 Wireless MIMO LAN Environments (5.2 GHz) 66
   3.6.1 Data evaluation 66
   3.6.2 Capacity computation 68
   3.6.3 Measurement environments 69
3.7 Indoor WLAN Channel (17 GHz) 70
3.8 Indoor WLAN Channel (60 GHz) 77
   3.8.1 Definition of the statistical parameters 78
3.9 UWB Channel Model 79
   3.9.1 The large-scale statistics 82
   3.9.2 The small-scale statistics 84
   3.9.3 The statistical model 86
   3.9.4 Simulation steps 87
   3.9.5 Clustering models for the indoor multipath propagation channel 87
   3.9.6 Path loss modeling 90
References 93

4 Adaptive and Reconfigurable Link Layer 101
4.1 Link Layer Capacity of Adaptive Air Interfaces 101
   4.1.1 The MAC channel model 103
   4.1.2 The Markovian model 103
   4.1.3 Goodput and link adaptation 105
   4.1.4 Switching hysteresis 107
   4.1.5 Link service rate with exact mode selection 108
   4.1.6 Imperfections in the adaptation chain 110
   4.1.7 Estimation process and estimate error 111
   4.1.8 Channel process and estimation delay 111
   4.1.9 Feedback process and mode command reception 112
   4.1.10 Link service rate with imperfections 112
   4.1.11 Sensitivity of state probabilities to hysteresis region width 114
   4.1.12 Estimation process and estimate error 115
   4.1.13 Feedback process and acquisition errors 118
4.2 Adaptive Transmission in Ad Hoc Networks 118

4.3 Adaptive Hybrid ARQ Schemes for Wireless Links 126
4.3.1 RS codes 127
4.3.2 PHY and MAC frame structures 127
4.3.3 Error-control schemes 129
4.3.4 Performance of adaptive FEC2 132
4.3.5 Simulation results 134

4.4 Stochastic Learning Link Layer Protocol 135
4.4.1 Stochastic learning control 135
4.4.2 Adaptive link layer protocol 136

4.5 Infrared Link Access Protocol 139
4.5.1 The IrLAP layer 140
4.5.2 IrLAP functional model description 142

References 145

5 Adaptive Medium Access Control 149
5.1 WLAN Enhanced Distributed Coordination Function 149
5.2 Adaptive MAC for WLAN with Adaptive Antennas 150
5.2.1 Description of the protocols 153
5.3 MAC for Wireless Sensor Networks 158
5.3.1 S-MAC protocol design 160
5.3.2 Periodic listen and sleep 161
5.3.3 Collision avoidance 161
5.3.4 Coordinated sleeping 162
5.3.5 Choosing and maintaining schedules 162
5.3.6 Maintaining synchronization 163
5.3.7 Adaptive listening 164
5.3.8 Overhearing avoidance and message passing 165
5.3.9 Overhearing avoidance 165
5.3.10 Message passing 166

5.4 MAC for Ad Hoc Networks 168
5.4.1 Carrier sense wireless networks 170
5.4.2 Interaction with upper layers 174

References 175

6 Teletraffic Modeling and Analysis 179
6.1 Channel Holding Time in PCS Networks 179

References 188

7 Adaptive Network Layer 191
7.1 Graphs and Routing Protocols 191
7.1.1 Elementary concepts 191
7.1.2 Directed graph 191
7.1.3 Undirected graph 192
7.1.4 Degree of a vertex 192
7.1.5 Weighted graph 193
7.1.6 Walks and paths 193
12.1.4 Hybrid channel borrowing schemes  373
12.1.5 Dynamic channel allocation  375
12.1.6 Centralized DCA schemes  376
12.1.7 Cell-based distributed DCA schemes  379
12.1.8 Signal strength measurement-based distributed DCA schemes  380
12.1.9 One-dimensional cellular systems  382
12.1.10 Fixed reuse partitioning  384
12.1.11 Adaptive channel allocation reuse partitioning (ACA RUP)  385

12.2 Resource Management in 4G  388

12.3 Mobile Agent-based Resource Management  389
   12.3.1 Advanced resource management system  392

12.4 CDMA Cellular Multimedia Wireless Networks  395
   12.4.1 Principles of SCAC  400
   12.4.2 QoS differentiation paradigms  404
   12.4.3 Traffic model  406
   12.4.4 Performance evaluation  408
   12.4.5 Related results  408
   12.4.6 Modeling-based static complete-sharing MdCAC system  409
   12.4.7 Measurement-based complete-sharing MsCAC system  410
   12.4.8 Complete-sharing dynamic SCAC system  411
   12.4.9 Dynamic SCAC system with QoS differentiation  412
   12.4.10 Example of a single-class system  412
   12.4.11 NRT packet access control  414
   12.4.12 Assumptions  415
   12.4.13 Estimation of average upper-limit (UL) data throughput  416
   12.4.14 DFIMA, dynamic feedback information-based access control  417
   12.4.15 Performance examples  418
   12.4.16 Implementation issues  425

12.5 Joint Data Rate and Power Management  426
   12.5.1 Centralized minimum total transmitted power (CMTTP) algorithm  427
   12.5.2 Maximum throughput power control (MTPC)  428
   12.5.3 Statistically distributed multirate power control (SDMPC)  430
   12.5.4 Lagrangian multiplier power control (LRPC)  431
   12.5.5 Selective power control (SPC)  432
   12.5.6 RRM in multiobjective (MO) framework  432
   12.5.7 Multiobjective distributed power and rate control (MODPRC)  433
   12.5.8 Multiobjective totally distributed power and rate control (MOTDPRC)  435
   12.5.9 Throughput maximization/power minimization (MTMPC)  436

12.6 Dynamic Spectra Sharing in Wireless Networks  439
   12.6.1 Channel capacity  439
   12.6.2 Channel models  440
   12.6.3 Diversity reception  440
   12.6.4 Performance evaluation  441
   12.6.5 Multiple access techniques and user capacity  441
   12.6.6 Multiuser detection  442
| 12.6.7  | Interference and coexistence | 442 |
| 12.6.8  | Channel estimation/imperfections | 443 |
| 12.6.9  | Signal and interference model | 443 |
| 12.6.10 | Receiver structure | 444 |
| 12.6.11 | Interference rejection circuit model | 446 |
| 12.6.12 | Performance analysis | 451 |
| 12.6.13 | Performance examples | 451 |
| References | | 457 |
